REVENUE ANALYTICS

Revenue Insights

- *Acquisition*
- *Churn*
- *Cohort retention*
- *Revenue and MoM growth*

In analytics, we can draw findings that can help us determine factors that impact our business. As a case study, we will find insights on improving revenue growth from a data table set up for D2C model.

- ***Acquisition analysis** — who came in and when*
- ***Revenue breakdown** — who drives value by plan*
- ***Churn analysis** — who left, why, how fast they left*
- ***Cohort retention** — which signup months retain and which don't*
- ***MoM growth** — the financial result of all of the above*
- ***Dashboard** — a data story that ties it all together visually*

	signup_month	new_customers	total_customers
0	2023-01-01	6	6.0
1	2023-02-01	5	11.0
2	2023-03-01	4	15.0
3	2023-04-01	6	21.0
4	2023-05-01	3	24.0
5	2023-06-01	4	28.0
6	2023-07-01	3	31.0
7	2023-08-01	3	34.0
8	2023-09-01	3	37.0
9	2023-10-01	2	39.0
10	2023-11-01	1	40.0

Revenue Insights

ACQUISTION

- Monthly Subscribers for acquisition growth.
- Cumulative sum of subscribers each month.
- January Spike
- April Spike
- Gradual decline from June

Insight: A lot of subscribers at the beginning of the year. New Year plans – include taking care of pets, getting new pets, trying out new things, actively seeking out quality products to reach goals.

*Simulated with Sample Datasets for subscription-based business model

Revenue Insights

REVENUE

	plan_name	active_subscriptions	total_revenue	revenue_pct
0	Full	14	24087.0	43.6
1	Regular	14	19304.0	34.9
2	Starter	12	11880.0	21.5

- Plans: Full, Regular, Starter (Simulated data model)
- Full Plan (Bigger portion subscriber) makes up of the most revenue for the business.
- Achieving subscribers for full plans will drive revenue significantly more.
- Strategising to retain most of the subscribers in full plan will need to be prioritised.

Insight:

Pet parents subscribe to full plan for various reasons –

- Have multiple pets, big pets (German Sheperd, e.g.)
- Delivery distance

*Simulated with Sample Datasets for subscription-based business model

Revenue Insights

CHURN ANALYSIS

	plan_name	total_customers	churned	churn_rate_pct
0	Full	14	5	35.7
1	Starter	12	3	25.0
2	Regular	14	3	21.4

	plan_name	avg_days_before_cancel	fastest_cancel	slowest_cancel
0	Starter	45.0	30	60
1	Regular	55.0	45	60
2	Full	62.0	40	90

- The most unsubscribed users are from the Full Plan – high reward, high risk.
- Average cancellation rate is within 2 months – meaning cancelling after a trial period.

Insight:

We can see subscribers in the full plan cancell the most. Subscribers cancell in a 2-month window - where they have not given more chances to the brand - loyalty has not formed yet.

*Simulated with Sample Datasets for subscription-based business model

Revenue Insights

COHORT RETENTION

- "Of the customers who joined in month X, how many were still active after 1 month? After 3 months? After 6 months?"
- Customers signing up after August leave by m2 consistently.
- Revenue churn exceeding revenue acquisition.

	cohort_month	total_customers	m0	m1	m2	m3	m4	m5	m6
0	2023-01-01	6	100.0	83.0	83.0	67.0	67.0	67.0	67.0
1	2023-02-01	5	100.0	100.0	100.0	80.0	80.0	80.0	80.0
2	2023-03-01	4	100.0	100.0	100.0	100.0	100.0	100.0	100.0
3	2023-04-01	6	100.0	100.0	50.0	50.0	50.0	50.0	50.0
4	2023-05-01	3	100.0	100.0	100.0	100.0	100.0	100.0	100.0
5	2023-06-01	4	100.0	100.0	50.0	50.0	50.0	50.0	50.0
6	2023-07-01	3	100.0	100.0	100.0	100.0	100.0	100.0	100.0
7	2023-08-01	3	100.0	100.0	67.0	67.0	67.0	67.0	67.0
8	2023-09-01	3	100.0	100.0	67.0	67.0	67.0	67.0	67.0
9	2023-10-01	2	100.0	100.0	50.0	50.0	50.0	50.0	NaN
10	2023-11-01	1	100.0	100.0	100.0	100.0	100.0	NaN	NaN

Insight: A cohort drops to 50% at m2 but holds at 50% through m6, those remaining customers are loyal. The problem is acquisition quality, not product quality. Acquisition in Q4 are sensitive to pricing, discounts, etc.

Revenue Insights

MONTH-OVER-MONTH GROWTH

- Revenue Growth in general shows a positive trend.
- MoM growth shows whether the growth is accelerating or decelerating.
- Retention dropped for cohorts in Q4.
- MoM growth had a sharp deceleration after July.
- MoM growth shows no significant acceleration due to the recovery from the previous churns.

	revenue_month	monthly_revenue	active_subs	new_customers	churned	mom_growth_pct
0	2023-01-01	954.0	6	6	0	NaN
1	2023-02-01	1583.0	10	5	1	65.9
2	2023-03-01	2277.0	14	4	1	43.8
3	2023-04-01	3014.0	19	6	1	32.4
4	2023-05-01	3339.0	21	3	0	10.8
5	2023-06-01	3491.0	22	4	3	4.6
6	2023-07-01	3968.0	25	3	0	13.7
7	2023-08-01	4076.0	26	3	2	2.7
8	2023-09-01	4553.0	29	3	0	11.7
9	2023-10-01	4814.0	30	2	1	5.7
10	2023-11-01	4814.0	30	1	1	0.0
11	2023-12-01	4597.0	29	0	1	-4.5
12	2024-01-01	4597.0	29	0	0	0.0
13	2024-02-01	4597.0	29	0	0	0.0
14	2024-03-01	4597.0	29	0	0	0.0

Insight: The revenue growth has been consistent at zero because it still hasn't recovered from the negatives. With the current churn rate, the revenue growth can go into negatives if not prioritised to retain customers after acquisition.
